

Phase 0: 50 Ultra-Basic Problems

1. Numbers & Basics (15 problems)

Start with simple logic building.

1. Print numbers from 1 to N
2. Print numbers from N to 1
3. Sum of first N natural numbers
4. Print multiplication table of a number
5. Count digits in a number
6. Reverse a number
7. Check palindrome number
8. Find largest of 3 numbers
9. Check even or odd
10. Check prime number
11. Print all divisors of a number
12. Sum of digits
13. Armstrong number check
14. GCD of two numbers
15. LCM of two numbers

2. Loops & Patterns (15 problems)

This builds strong logic.

16. Print square star pattern
17. Right triangle pattern
18. Inverted triangle
19. Pyramid pattern
20. Number triangle
21. Floyd's triangle
22. Pascal's triangle (basic understanding)

- 23. Diamond pattern
 - 24. Hollow square pattern
 - 25. Hollow triangle
 - 26. Reverse pattern printing
 - 27. Pattern with alphabets
 - 28. Continuous number pattern
 - 29. Zig-zag pattern (basic)
 - 30. Pattern with spaces
-

3. Strings Basics (10 problems)

Learn how to manipulate text.

- 31. Reverse a string
 - 32. Check palindrome string
 - 33. Count vowels and consonants
 - 34. Convert lowercase to uppercase
 - 35. Remove spaces from string
 - 36. Find length without built-in function
 - 37. Count frequency of characters
 - 38. Check anagram (basic logic)
 - 39. Remove duplicate characters
 - 40. Find first non-repeating character
-

4. Arrays Basics (10 problems)

First step before real DSA arrays.

- 41. Find largest element in array
- 42. Find smallest element
- 43. Reverse an array
- 44. Sum of array elements

- 45. Count even and odd numbers
 - 46. Sort array (basic – bubble sort)
 - 47. Search element (linear search)
 - 48. Copy one array to another
 - 49. Find second largest element
 - 50. Remove duplicates (basic approach)
-

How Phase 0 Should Be Done

Don't rush this—this phase decides everything.

- Solve in **any one language** (Java/Python/C++)
 - Avoid copying code
 - Focus on:
 - loops
 - conditions
 - dry run
-

When You Finish Phase 0

You should be able to:

- Write code without fear
- Understand loops clearly
- Solve simple logic without help

Then → move to your **Phase 1 (the 50 problems I gave earlier)**
